Description

[Report article](#)

**The module (Micro SD card adapter) is a Micro SD card reader module, through the file system and SPI interface controller, SCM system to complete the file to read and write the MicroSD card. For Arduino users can directly use the for Arduino IDE comes with an SD card to complete the library card initialization and read-write.

**The built-in module level regulator circuit, level conversion circuit board which can interface level is 5V or 3.3V.

**Voltage: 4.5V~5.5V DC; Communication interface: SPI standard; Interface voltage level: 3.3V or 5V;

**Applicable card type: Micro SD Card, Micro SDHC Card.

**Micro SD card to indicate the direction of the converted 3.3V, the Micro SD card interface to control the direction of the MISO signal is also converted to 3.3V, general AVR microcontroller systems can read the sign.

**The communication interface is a standard SPI interface, easy to connect to any device with SPI interface;
Specifications:

Voltage: 4.5V~5.5V DC

Current: 0.2 ~ 200mA

Communication interface: standard SPI

Interface voltage level: 3.3V or 5V

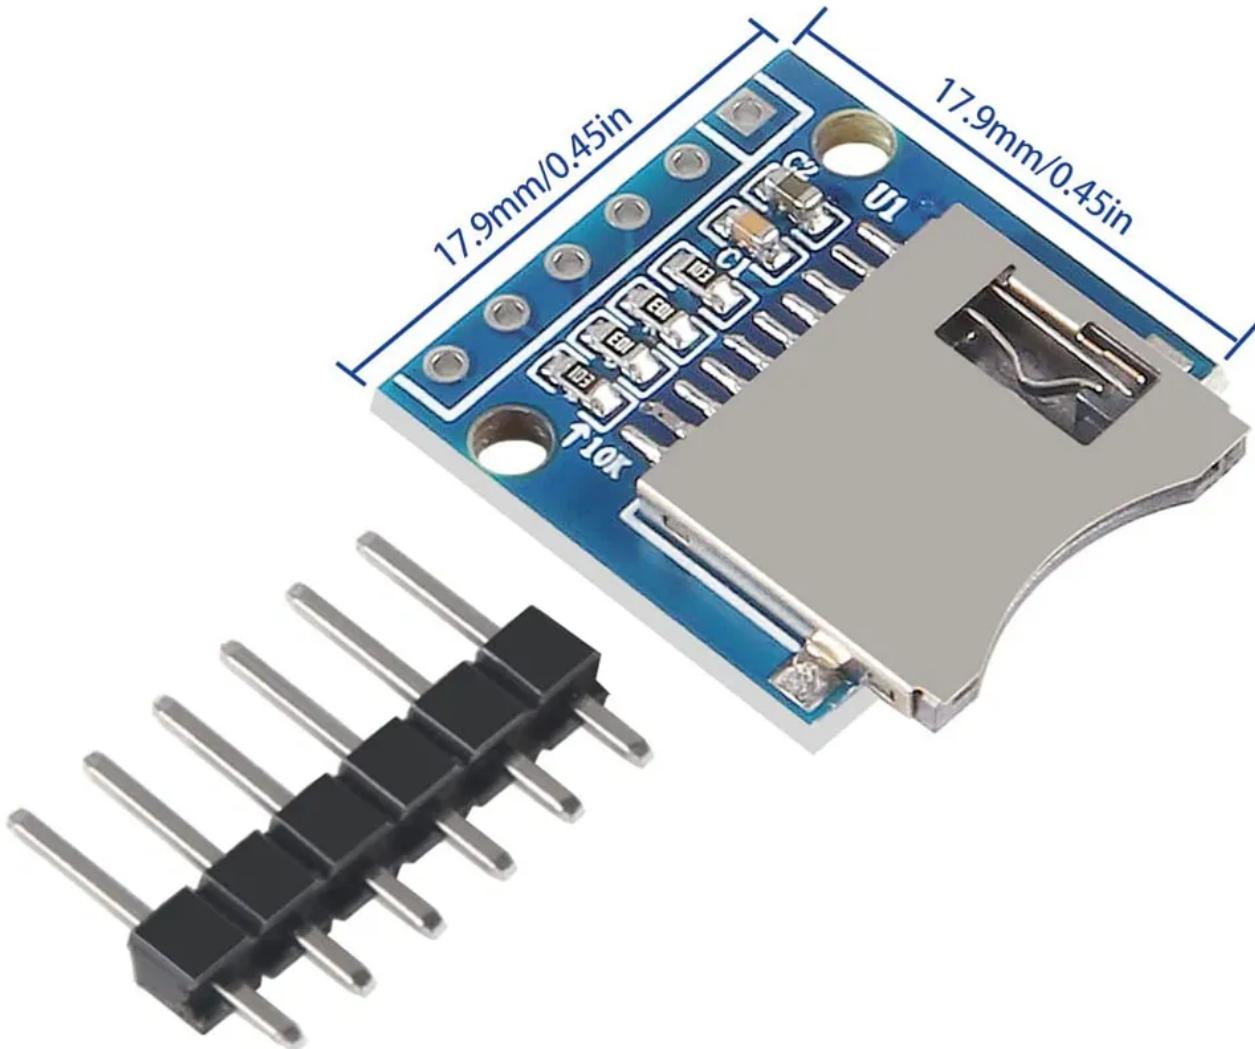

Applicable card type: Micro SD card (less than 2G), Micro SDHC card (less than 32G)

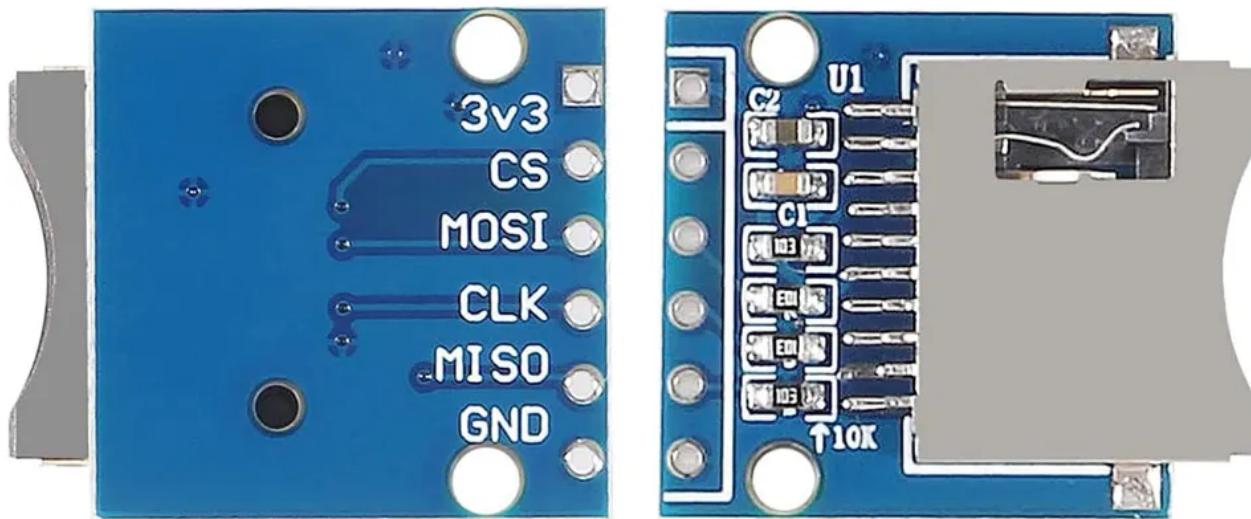

Control interface: (GND, 3V3, MISO, MOSI, CLK, CS), GND to ground, 3V3 is power supply, MISO, MOSI, CLK for SPI bus, CS is chip select signal PIN

Micro SD card connector: automatic pump cover, easy card insertion

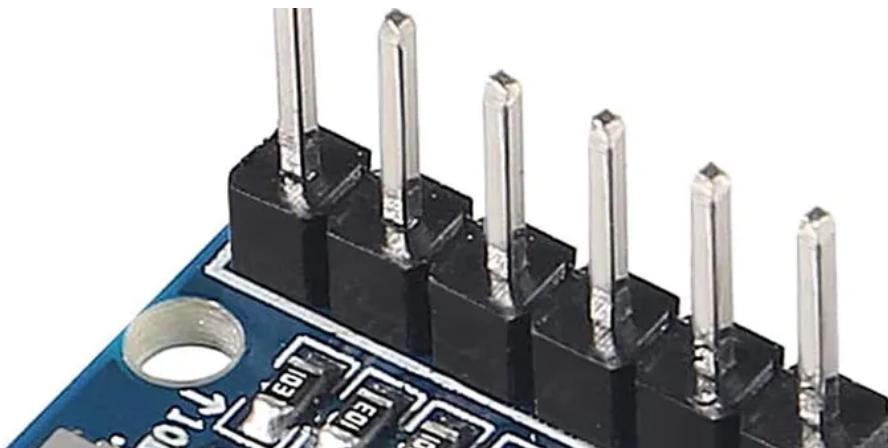

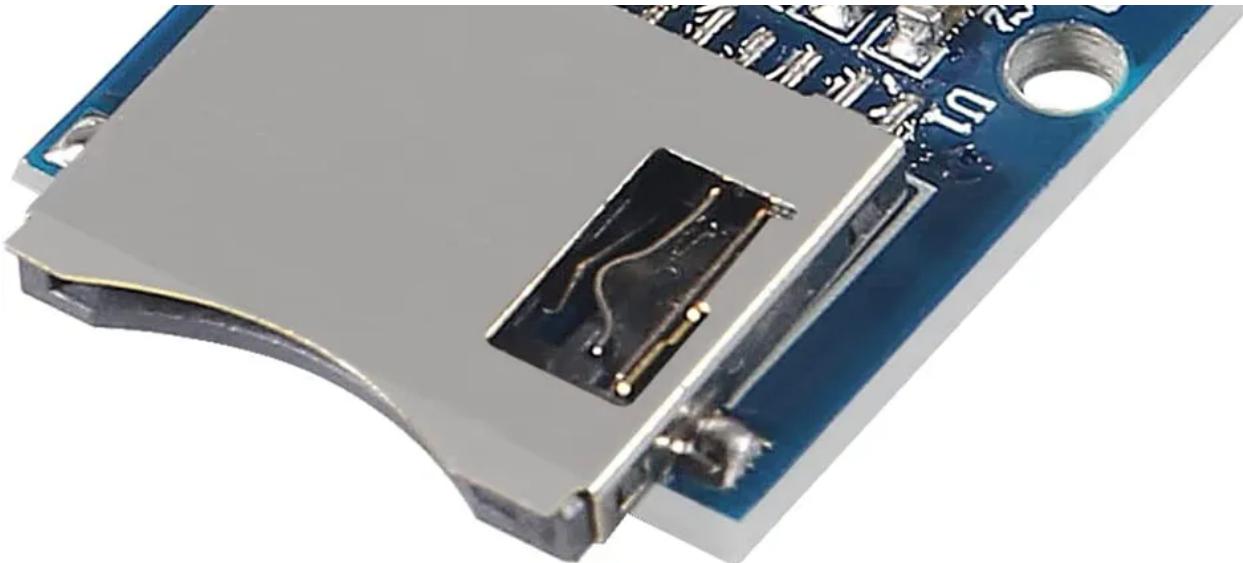

Package Included:

1 Micro SD Card Adapter
